

Getting Started • **Reviewer Guidelines**

How to check attempter submissions — verifying verdicts, evidence quotes, page numbers, and notes within a 5-minute time budget.

01 **Reviewer Role & Time Budget**

Who This Guide Is For

As a reviewer, you check work submitted by attempters on the ADU-Bench QA Verification project. For each submitted task, you verify that the attempter's verdict (Correct or Wrong), evidence quotes, page numbers, and notes are accurate, well-formatted, and supported by the document evidence.

YOU ARE NOT REDOING THE TASK

Your job is to confirm that the attempter applied the project rules correctly, and to flag any

ADU-BENCH QA

Getting Started › Reviewer Guidelines

2 / 3 [➔ Save & exit](#)

MINUTE 1 — Orient Yourself

- Read the question and the AI-generated answer.
- Note the attempter's verdict (Correct or Wrong).
- Glance at the cited page numbers and the evidence quote that was pasted.

MINUTES 2–3 — Verify the Evidence

- Open the cited evidence pages in the left panel.
- Confirm the quoted text actually appears on those pages, word for word.
- For tables, figures, formulas, or layout-sensitive answers, switch to the **PDF Reference** tab.

Step 2 of 3

[Next](#)

MINUTE 4 — Confirm the Verdict

Ask yourself: does the pasted evidence actually support the verdict?

- If **Correct**, the evidence must clearly back the answer.
- If **Wrong**, the evidence must contradict the answer, show it is incomplete, or show it is unsupported.
- Apply the special-case rules when relevant.

MINUTE 5 — Format Check and Submit

- Confirm the quote uses the [Page X] "exact text" format.
- Confirm the page numbers field lists only pages containing the cited evidence.
- Confirm a note was added if required.
- Submit with **Approve** or **Reject**, and a short feedback comment if rejecting.

If the task is genuinely too complex to verify in 5 minutes, **reject it** with a note explaining why and move on.

02 What to Check

THE VERDICT

The attempter's Correct/Wrong choice must follow the project rules.

- **Correct** is appropriate when the answer is directly supported, a valid paraphrase, gives the right multiple-choice option, or correctly identifies a "not answerable" case.
- **Wrong** is appropriate when the evidence contradicts the answer, the answer is incomplete on an exact-text question, or the wrong multiple-choice option was selected.

If the verdict does not match the evidence, reject and explain.

EVIDENCE QUOTES

The Evidence Quotes field must contain **exact text** from the source — not the attempter's paraphrase or explanation.

- Text should be verbatim. Minor OCR artifacts or formatting differences are tolerable.
- Format should be [Page X] "exact text" .
- Reject if the field contains only an explanation, paraphrase, or text not on the cited page.

PAGES USED

The page numbers field must list **only the**

NOTES

Notes are optional in general, but **required**

- Multiple pages are fine when needed. Extra irrelevant pages should not be included.

- The answer is partially correct or close but not exact.
- The PDF image and markdown evidence differ.
- Information comes from a table, figure, formula, or diagram.
- Multiple pages were needed.

If a note is clearly needed but missing, reject and ask for one.

SPECIAL CASES — Apply the same rules as attempters

- **Multiple choice:** the chosen option must match the evidence. Wrong if not supported, even if the explanation contains some correct information.
- **Not answerable:** confirm the evidence really does not contain the answer. If it does, the verdict should be Wrong.
- **Exact title or referenced question:** the answer must include the full required text, not a truncated version.
- **Tables, figures, formulas:** the PDF Reference tab is the final source of truth when markdown does not preserve visual structure.

03 When to Approve or Reject

APPROVE

Approve when **all** of the following are true:

- The verdict is correct given the evidence.
- The evidence quote is verbatim, present on the cited page, and in the right format.
- Pages used are accurate and not padded with irrelevant pages.
- A note is present if the situation requires one.

REJECT

Reject when **any** of the following are true:

- The verdict is wrong.
- The evidence quote is missing, paraphrased, or pulled from a different page.
- The Pages Used field is empty, wrong, or padded with irrelevant pages.
- A note was clearly required and is missing.
- The format of the quote is broken in a way that makes the evidence hard to verify.

When you reject, leave a short feedback comment that names the issue and points to the fix:

"Verdict should be Wrong. The evidence on page 12 contradicts the answer."

"Quote does not appear on page 5. Please re-check the cited page."

"Please add a note. The answer depends on a value from the table on page 8."

04 Common Attempter Mistakes to Watch For

Marking an answer **Correct because it sounds plausible**, without verifying the evidence.

Pasting an **explanation in the Evidence Quotes field** instead of a verbatim quote.

Citing a **page number that does not contain the quoted text**.

Marking a **partially correct answer as Correct** on an exact-text question.

Using **outside knowledge** to justify a Correct verdict.

Skipping the **PDF Reference** when the answer depends on a table, figure, or formula.

Marking **"not answerable" as Correct** without confirming the evidence is silent on the topic.

Pasting **huge blocks of text** when one sentence would be enough.

Final Check Before Submitting Your Review

Ask yourself three questions:

1. Does the verdict follow from the evidence?
2. Is the evidence quote real, complete, and on the right page?
3. Was a note added if one was needed?

If all three are **yes**, Approve. If any is **no**, Reject with a one-line comment pointing to the fix.
